edition 1.0

Acknowledgements

We would like to acknowledge those who assisted with the 2013 Youth Risk Behavior Survey (YRBS) Report including the Nevada Department of Education; school district superintendents; school principals, teachers and staff; the Southern Nevada Health District; and the Substance Abuse Prevention Coalition members.

We acknowledge the University of Nevada, Reno, School of Community Health Sciences, Center for Health Statistics and Informatics for conducting the 2013 Nevada YRBS, and for preparing the final report.

We would like to acknowledge Dr. Wei Yang, Professor; Dr. Kristen Clements-Nolle, Associate Professor; David Frankenberger MPH (Cand.), YRBS Coordinator; and Fannie Zhang MS, Biostatistician.

PURPOSE OF THE YRBS

The purpose the Youth Risk Behavior Survey (YRBS) is to provide Nevada data to assess trends in priority health-risk behaviors among high school students; measure progress toward achieving national health objectives for *Healthy People 2020* and other program and policy indicators; and evaluate the impact of broad school and community interventions at the national, state, and local level. It is our intention that this data will be used by education and health professionals, policy makers, community members, and researchers to improve the health-risk behaviors among Nevada's high schools students. This report contains the Nevada-specific YRBS statistics for the 2012-2013 academic calendar year.

SUMMARY HIGHLIGHTS

Safety

- 21.4% of high school students rode in a car or other vehicle driven by someone who had been drinking alcohol during the 30 days before the survey.
- 7.0% of high school students drove a car or other vehicle when they had been drinking alcohol during the 30 days before the survey.
- 35.7% of high school students texted or emailed while driving a car or other vehicle during the 30 days before the survey.

Violence-Related Behaviors

- 15.7% of high school students carried a weapon during the 30 days before the survey.
- 6.5% of high school students were threatened or injured with a weapon on school property during the 12 months before the survey.
- 19.6% of high school students were bullied on school property during the 12 months before the survey.
- 15.0% of high school students were electronically bullied during the 12 months before the survey.
- 11.0% of high school students did not go to school because they felt unsafe at school or on their way to or from school during the 30 days before the survey.
- 10.3% of high school students experienced dating violence during the 12 months before the survey.

Depression and Suicide

- 31.7% of high school students experienced depression during the 12 months before the survey.
- 19.3% of high school students seriously considered attempting suicide during the 12 months before the survey.

- 11.8% of high school students attempted suicide during the 12 months before the survey.

Tobacco Use

- 38.8% of high school students have smoked a cigarette at least one time during their lifetime.
- 10.2% of high school students smoked cigarettes during the 30 days before the survey.
- 4.5% of high school students used smokeless tobacco during the 30 days before the survey.

Alcohol Use

- 67.3% of high school students drank alcohol at least one time during their lifetime.
- 33.3% of high school student drank alcohol during the 30 days before the survey.
- 17.5% of high school students participated in binge drinking during the 30 days before the survey.

Marijuana and Other Drugs

- 39.8% of high school students used marijuana at least one time during their lifetime.
- 18.5% of high school students used marijuana during the 30 days before the survey.
- 18.4% of high school students took prescription drugs without a doctor's prescription at least one time during their lifetime.
- 17.3% of high school students used synthetic marijuana at least one time during their lifetime.
- 10.8% of high school students used ecstasy at least one time during their lifetime.
- 9.8% of high school students used inhalants at least one time during their lifetime.
- 31.1% of high school students were offered, sold, or given an illegal drug by someone on school property during the 12 months before the survey.

Sexual Behaviors

- 43.1% of high school students had sexual intercourse at least one time during their lifetime.
- 13.6% of high school students had sexual intercourse with four or more persons during their lifetime.

- 28.2% of high school students were sexually active during the three months before the survey.
- Among the 28.2% of high school students who are currently sexually active, 56.3% used a condom during their last sexual intercourse.
- 4.7% of high school students have been pregnant or have gotten someone pregnant during their lifetime.

Diet

- 58.0% of high school students ate fruit or drank 100% fruit juices one or more times per day during the 7 days before the survey.
- 81.5% of high school students ate vegetables one or more times per day during the 7 days before the survey.
- 33.8% of high school students drank one or more glasses of milk per day during the 7 days before the survey.
- 16.2% of high school students drank soda or pop one or more times per day during the 7 days before the survey.
- 34.5% of high school students ate breakfast all 7 days before the survey.

Physical Activity

- 43.8% of high school students were physically active at least 60 minutes per day on five or more days during the 7 days before the survey.
- 37.9% of high school students played video or computer games or used a computer for three or more hours per day on an average school day.
- 30.2% of high school students watched television three or more hours per day on an average school day.
- 52.5% of high school students attend physical education (PE) classes on one or more days in an average week when they were in school.

Weight

- 11.5% of high school students were obese.
- 14.9% of high school students were overweight.
- 50.0% of high school students were trying to lose weight.

Health-Related Topics

- 24.0% of high school students have been told by a doctor or nurse that they had asthma during their lifetime.
- 68.1% of high school students visited a dentist during the 12 months before the survey.

INTRODUCTION

Priority health risk behaviors (i.e. preventable behaviors that contribute to the leading causes of morbidity and mortality) are often established during childhood and adolescence and extend into adulthood. Ongoing surveillance of youth risk behaviors is critical for the design, implementation, and evaluation of public health interventions to improve adolescent health. The Youth Risk Behavior Survey (YRBS) is a national surveillance system that was established in 1991 by the Centers for Disease Control and Prevention (CDC) to monitor the prevalence of health risk behaviors among youth. YRBS is a biennial, anonymous, and voluntary survey of students in 9th through 12th grade in traditional, public high schools. The survey asks students to self-report their behaviors in six major areas of health that directly lead to morbidity and mortality, these include:

- 1) Behaviors that contribute to unintentional injuries and violence;
- 2) Sexual behaviors that contribute to human immunodeficiency virus (HIV) infection, other sexually transmitted diseases, and unintended pregnancy;
- 3) Tobacco use;
- 4) Alcohol and other drug use;
- 5) Unhealthy dietary behaviors; and
- 6) Physical inactivity.

In 2013, thirty schools in Nevada were randomly chosen for the national YRBS. To ensure greater representation from rural schools, the Nevada Division of Public and Behavior Health and the Nevada Department of Education contracted with the University of Nevada, Reno, Center for Health Statistics and Informatics to conduct the YRBS in all school districts, except Clark County. The Southern Nevada Health District and their contractor were responsible for collecting YRBS data in Clark County. All Nevada public high schools are represented in this report.

METHODS

Sampling, Weighting, and Analysis

The 2013 Nevada YRBS sample was designed to ensure that every eligible student had an equal chance of selection. This survey employed a two-stage (Region, School, and Classroom) cluster sample design to produce a representative sample of students in grades 9–12 (all Nevada public high schools). The population of Nevada is unevenly distributed with Clark County School District representing more than 60% of high school enrollment. In order to provide regional data that represents all counties in the state, the first sampling stage grouped all 17 school districts into 7 regions that generally reflect the prevention coalition structure; this was also done to ensure that individual schools could not be identified. For the Clark County region, schools were selected with probability proportional to school enrollment size, while all schools from the remaining six regions were selected. In the second sampling stage, classes were selected within schools with the probability based on a required margin of error in the sample size in each region. Intact classes of either all second period or all required English courses

were randomly selected from each school. The questionnaire was administered to all students in sampled classes from February to May, 2013.

The 2013 Nevada YRBS data were weighted at the state level and regional level based on sex, grade level, and race/ethnicity of students in each region. The weighting process ensures that the estimates accurately represent the entire student population in each region and the state as a whole. Non-response or poor sampling procedures can result in a sample that is not a representative subset of the population; therefore un-weighted results from these samples may not accurately reflect student behaviors and could be misleading. This report only displays weighted results that are representative of the regions and the state.

Table 1: 2013 YRBS regions and coalition structure

Region	School District	# Schools	Coalitions
1	Carson City Douglas County	6	Partnership Carson City Partnership of Community Resources
2	Elko County White Pine County Eureka County	9	Pace Coalition
3	Churchill County Humboldt County Pershing County Lander County	6	Churchill Community Coalition Frontier Community Coalition

5	Nye County Lincoln County	9	Nye Communities Coalition
6	Washoe County	14	Join Together Northern Nevada
7	Clark County	20	Care Coalition PACT Coalition Nevada Community Prevention Coalition

Permission Status and Response Rates

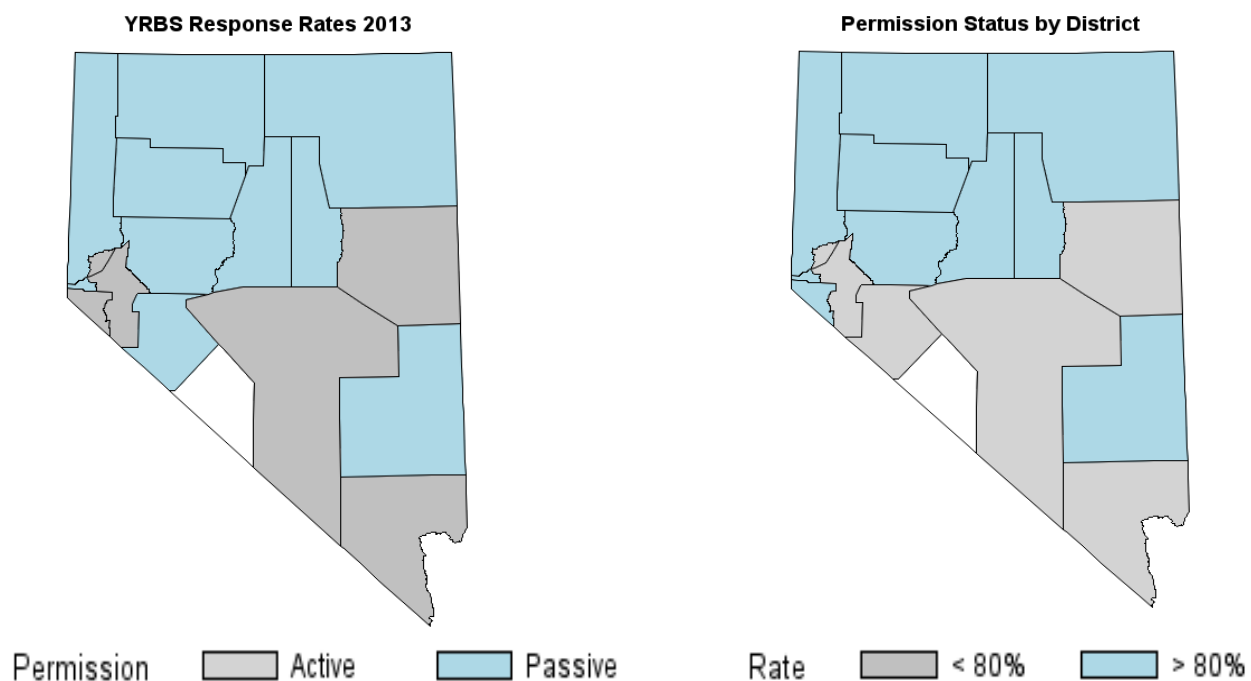

Parental permission is required for YRBS participation. Nevada school districts have two forms of parental permission: 1) active and 2) passive. *Active parental permission* means the students must return a signed permission form indicating their parent or guardian's approval for participation in the survey. *Passive parental permission* means the students take a permission form home and return it only if their parent or guardian does not want them to participate in the survey. The type of permission status varies by district based on school district policy. Active permission usually requires more time and may reduce the number of students that participate in the survey. All school districts and schools agreed to participate in the 2013 YRBS and 3,928 youth completed the survey. While the response rates varied by school district, the overall response rates (a combination of school and student participation) was much higher in 2013 compared to 2011.

Table 2: 2011 and 2013 YRBS response rates by School District

District	2011 YRBS Response Rate	2013 YRBS Response Rate	Difference	Permission*
Carson City School District	83.3%	85.5%	2.2%	P
Churchill County School District	0.0%	85.3%	85.3%	P
Douglas County School District	0.0%	79.2%	79.2%	A
